Pro-Concepts Risk Management Application
Provides Real Time Enterprise- Risk Posture Reporting

March 28 2018, Virginia Beach **VA**

Pro-Concepts (ProConceptsLLC.com) announces the release of **Risk Radar® Enterprise (RRE) Version 6.0** with customizable real time Enterprise/Project level risk posture reporting. Executives and Managers customize their dashboard providing immediate cueing of organizational risks and opportunities.

Pro-Concepts' latest Risk Radar® Enterprise Version is a robust risk management solution which allows organizations to integrate, enhance and streamline their risk management program into their daily workflows. By pro-actively engaging all the organization's stakeholders, risk and opportunity awareness is improved and a risk-resistant organizational culture is advanced.

Real Time Executive Dashboard displays combined with embedded Microsoft Word and Microsoft PowerPoint reporting and presentation features greatly reduces the intensive man hours previously required to create, manage and report on an organization's risk posture. Now capturing enterprise and project risk data and presenting it via Executive Dashboard allows for greater visibility and real-time insight into critical strategic and operational activities—reducing risk and saving time and money for governmental and commercial organizations.

"Your organization wants to proactively manage and communicate risks. Pro-Concepts offers an intuitive, time-saving, user-friendly application for managing the risk life cycle, which provides a high return on investment during the first year," said Shawn O'Rourke, President of Pro-Concepts, LLC.

Every day new challenges or threats (risks) can arise, causing organizations to refocus their activities to compensate. While refocusing, previously targeted high interest risks can be lost in the corporate noise due to the lack of real-time visibility. Risk Radar® Enterprise not only provides a real-time visible perspective, but more importantly, encourages risk awareness and remediation participation--from the corporate board to critical frontline workers.

Risk Radar® Enterprise (RRE) Version 6.0 is the cost effective, intuitive and easy-to-implement solution to regulatory and certification requirements which require a clear demonstration an organization's commitment to enterprise/program risk management.

For more information or a demonstration of the Risk Radar® Enterprise application, organizations may call (757) 637-0440 x 206 or email info@proconceptsllc.com.
